

# Authorization & Authentication

## Objective:

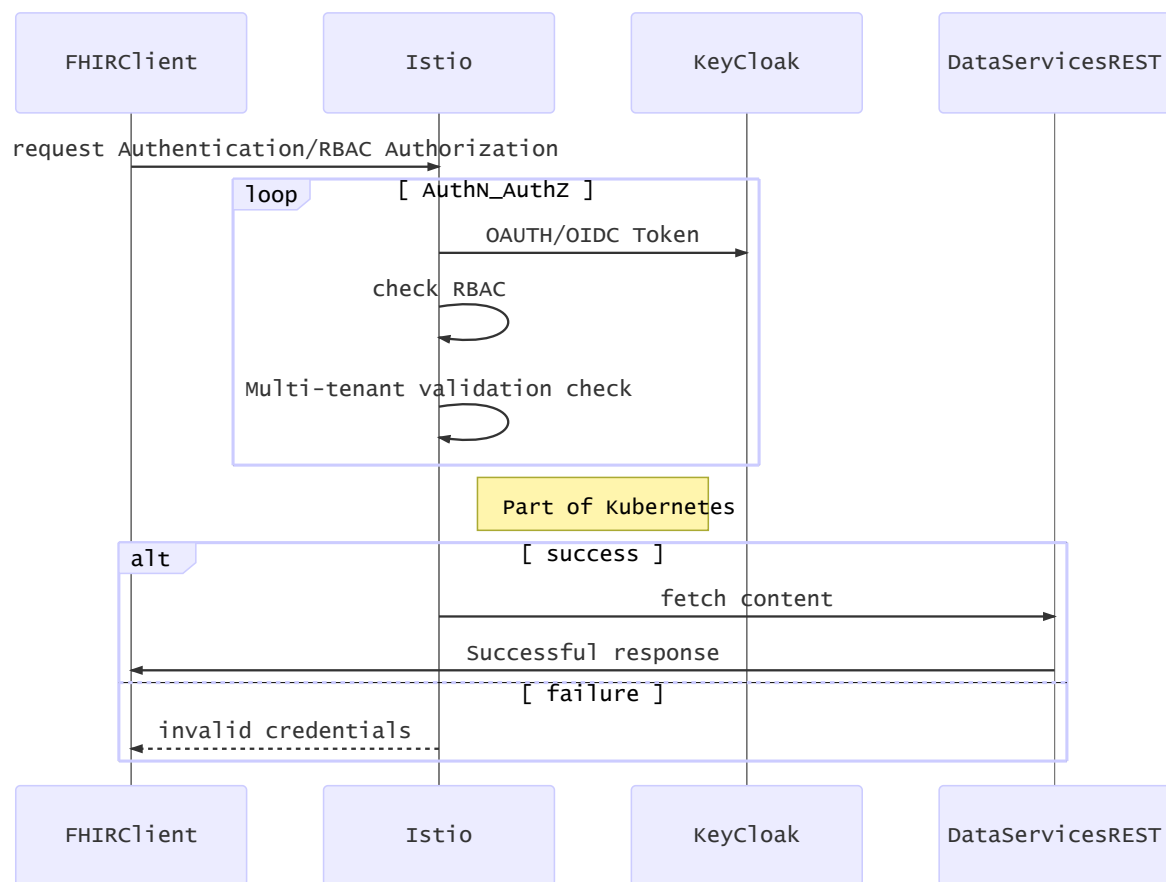

Outline the chosen approach for authorization and authentication for the clients of the **FHIR** services.

Require minimal changes on the REST API application.

## Flow

## Sequence Diagram

## KeyCloak:

The approach will use `keyCloak` server to provide `OAUTH/OIDC` token as well as perform RBAC authorization

## Long Term:

KeyCloak provides `social logins` as well, which will enable external clients to authenticate against other providers.
